

Drafting an emerging picture

Name: REEMA JIYANI

Community (UN SD goal): Goal 3: Ensure healthy lives and promote well-being for all at all ages
Goal 17: Revitalize the global partnership for sustainable development

Date: 13/05/2021

Instructions:

Using your researched information fill out the flowing comparing the current state of the art with what you think new (software) innovations could bring to the community

Covering the orientations	
Compare the left-hand column of the document "Technology configuration inventory" table with the right-hand column of the document "Community characteristics & orientation" table. What do you notice about the match (or mismatch) between your dominant community orientations and the current configuration of tools?	
How well does the technology inventory cover the orientations? What themes emerged from both the community orientations and the technology configuration from your colleagues' notes	Community want common platform to discuss their doubts and references to solve their mental health issues. So from this, I decided to create broadcast room and forum facility to support their needs.
<input checked="" type="checkbox"/> Are you almost there? <input type="checkbox"/> Are there big gaps?	As of now, from my research I almost there.
What is the range of skills? If their interests and/or skills are diverse, could it cause conflict or distraction?	For these application they do not need specific skills or interest. So, different skill does not create distraction. This application served as resource material or use as discussion board to solve their issues.
Achieving integration	
Look at all the pieces of your configuration	
What level of integration and interoperability has been achieved?	They just need android or IOS device to use this application. As well as, they need internet pack in their device to get updates. By broadcast room and forums they can easily contact each other.
Where are there big gaps	For now I did not find any big gaps but may be in future development I get something.
Balancing the polarities (Current state)	
How is the configuration balanced with respect to each polarity?	

[illegible]
